⛨ Hospital System – Assignment

Objective

Build a simple **Hospital Appointment System** using **ASP.NET Core MVC** that allows patients to view doctors and book appointments.

Mandatory Requirements

1️⃣ Home Page

The Home Page must contain **two main buttons**:

- **Make Appointment**
- **View Appointments**

2️⃣ Doctors Page

When the user clicks **Make Appointment**, a page should appear that displays **all available doctors**.

This page must include:

- A **list of all doctors**
- **Filtering options**:
  - Filter by **Doctor Name**
  - Filter by **Specialization**
- **Pagination** to navigate through doctors

Each doctor should display:

- Doctor Image
- Doctor Name
- Specialization
- **Book Appointment button**

3️⃣ Book Appointment Page

When the user clicks **Book Appointment**, a new page should appear containing a form with the following fields:

- **Patient Name**
- **Date**
- **Time**

After submitting the form:

- The appointment must be **saved in the `Appointments` table**.
- The user must be **redirected to the Appointments page**.

4️⃣ Appointments Page

This page should display **all booked appointments**.

Each appointment should show:

- Patient Name
- Doctor Name
- Specialization
- Appointment Date
- Appointment Time

Optional Requirements

Students can implement the following features:

1️⃣ Date Restriction

Available appointment days should be only:

Sunday → Thursday

2️⃣ Time Slots

Available time slots should be every **30 minutes** starting from:

9:00 AM → 4:30 PM

Example:

- 9:00 AM
- 9:30 AM
- 10:00 AM
- 10:30 AM
- ...
- 4:30 PM

3️⃣ Prevent Double Booking

The system must **prevent booking the same doctor at the same date and time**.

Example:
If **Dr. Ahmed** already has an appointment at **10:00 AM on 20/03/2026**, another patient **cannot book the same slot**.

4️⃣ Styling (UI/UX)

Apply **clean and modern styling** using:

- **Bootstrap**
- Ai Tools (Chatgpt , deepseek , Any Ai Editor …)
